$ summary

Backend engineer with 8+ years of total experience, building and operating systems in Django and Node/TypeScript. I put the rules that must hold into the database and the tests, and I start projects from my own pruned, fully tested Django foundation.

$ experience

Freelance Software Engineer — Independent · Remote

Mar 2021 – Present

> Built and delivered Django CRM systems for 27+ clients across schools, clinics and small businesses, covering employee management, payroll, attendance tracking and reporting.
> Own the full lifecycle for each deployment: schema design, REST API, provisioning, release and ongoing support.
> Run the infrastructure directly: self-managed Linux servers with PostgreSQL, rather than handing off to a platform team.
> Sole engineer on some engagements; on others, owned the backend alongside a frontend developer. Worked directly with non-technical stakeholders to scope and prioritise.

Junior Software Developer — Matalli Infotech · Dombivli

Aug 2018 – Feb 2021

> Built and maintained internal web applications on Django 2.2 LTS as part of a small engineering team.
> Wrote unit and database-level tests, and introduced CI/CD pipelines to shorten the release cycle.
> Managed deployments to Linux servers, AWS and Heroku, and handled production fixes with minimal downtime.

$ selected projects

Lead Management Platform

2026

github.com/code-kasha/lead-platform · Live demo · Write-up

Django REST API: leads move through a validated pipeline with every change on a timeline, and the React app is typed from the API schema.

> Admins manage every lead; members see and work on only the leads they created or are assigned to, and anything else returns 404.
> 99 backend and 74 frontend tests. CI also runs flake8, a missing-migrations check, the stale-schema and stale-types check, and a Docker build with a smoke test of the running container.

stack: Python · Django · Django REST Framework · PostgreSQL · OpenAPI · React · TypeScript

Webhook Delivery

2026

github.com/code-kasha/webhook-delivery · Live demo · Write-up

Node.js and TypeScript service: signed webhooks with durable retries and a full attempt history, on PostgreSQL.

> Transactional fan-out, fenced worker leases and bounded retries retain events and attempt history across failures; delivery is at least once, with no ordering guarantee.
> 85 tests run against PostgreSQL in CI on Node 22 and 24, including concurrent claims, worker crashes, database outages, HTTPS verification and SSRF boundaries.

stack: Node.js · TypeScript · Fastify · PostgreSQL · Zod · OpenAPI · Docker

CRM [In research and planning]

A CRM that arrives already set up for how your business works — sales, agency, real estate or field services — instead of making you configure it first.

$ skills

Backend	Django · DRF · Node.js · Express · Fastify
Data	PostgreSQL · Constraints & locking · Redis
Quality	Vitest · Pytest · Zod · OpenAPI
AI tools	Claude Code · OpenAI Codex · ChatGPT
Languages	Python · TypeScript · JavaScript · SQL
Platform	Docker · CI/CD · Linux · AWS · Vercel
Frontend	React · Next.js · Tailwind · Redux · HTMX

$ education

B.Sc, Computer Science — P V G's College of Science

2014 – 2018
