\$ summary |

Backend engineer with 8+ years of total experience, building and operating systems in Django and Node/TypeScript. I ship the unglamorous parts properly: typed API contracts, integration tests that run in CI, and deployments I maintain myself.

\$ experience |

Freelance Software Engineer Independent · Remote

Mar 2021 – Present

- > Built and delivered Django CRM systems for 27+ clients across schools, clinics and small businesses, covering employee management, payroll, attendance tracking and reporting.
- > Own the full lifecycle for each deployment: schema design, REST API, provisioning, release and ongoing support.
- > Run the infrastructure directly: self-managed Linux servers with PostgreSQL, rather than handing off to a platform team.
- > Sole engineer on some engagements; on others, owned the backend alongside a frontend developer. Worked directly with non-technical stakeholders to scope and prioritise.

Junior Software Developer Matalli Infotech · Dombivli

Aug 2018 – Feb 2021

- > Built and maintained internal web applications on Django 2.2 LTS as part of a small engineering team.
- > Wrote unit and database-level tests, and introduced CI/CD pipelines to shorten the release cycle.
- > Managed deployments to Linux servers, AWS and Heroku, and handled production fixes with minimal downtime.

\$ selected projects |

Lead Management Platform

2026

github.com/code-kasha/lead-platform · [Live demo](#) · [Write-up](#)

A Django REST API that moves sales leads through a validated pipeline and records every change on a timeline, with a React and TypeScript app whose types come from the API's schema.

- > Admins manage every lead; members see and work on only the leads they created or are assigned to, and anything else returns 404.
- > 99 backend and 74 frontend tests. CI also runs flake8, a missing-migrations check, the stale-schema and stale-types check, and a Docker build with a smoke test of the running container.

stack: Python · Django · Django REST Framework · PostgreSQL · OpenAPI · React · TypeScript

Operations API

2026

github.com/code-kasha/operations-api · [Live demo](#) · [Write-up](#)

A Django REST API for the staff side of a small organisation: staff and roles, shifts and attendance, leave, office timesheets and overtime, working-day payroll and reports, built from scratch with fictional data.

- > Payroll pro-rates base pay by working days for joiners, leavers, absences and unpaid leave, rounds half-up to the paisa, pays each approved overtime request exactly once and locks finished pay runs. It calculates gross pay only and claims no statutory compliance.

stack: Python · Django · Django REST Framework · PostgreSQL · OpenAPI · Docker · GitHub Actions

CRM [In research and planning]

A CRM that arrives already set up for how your business works — sales, agency, real estate or field services — instead of making you configure it first.

\$ skills |

Backend Django · DRF · Node.js · Express · REST
Data PostgreSQL · MongoDB · Redis · Query tuning
Quality Vitest · Pytest · Zod · OpenAPI

Languages Python · TypeScript · JavaScript · SQL
Platform Docker · CI/CD · Linux · AWS · Vercel
Frontend React · Next.js · Tailwind · Redux
